UL		[U] F' (L' U' L F)	This is a pretty easy case.
UF		(R' F R F)	This is called the sledgehammer.
UB		y [U] F (R U) (R' F)	This one is pretty quick.
UFUL		(R' U' F U) (R2 U) (R' F)	This one is a bit too long to be practical. I will usually just do a sledgehammer or regular insertion here.
UFUB		(R' F) (R2 U R' U' F)	This one is not great, but it's still decently fast.
UBUL		y [U2] (F U) (R U) (R' F)	This one is a bit too long to be practical. I will usually just do a sledgehammer or regular insertion here.
NONE		y (R' F' R) U2 (M' U' M)	This case is pretty neat because it turns what would be a nasty no edges OLL case into a nice case with all edges oriented and it's a pretty fast alg.

Turn the U layer to move an unsolved corner into the location highlighted in the red diagram next. If you don't have either one, use some thick, clear tape instead. If the colors on your cube do not match, you can still use this guide! **Step 1: Solving the white cross** Start by creating a flower on the U face. I like to test myself by giving the cube to someone else and telling them to make a number of turns. Some instructions may then have you flip the cube so the white is on the bottom before you proceed. Solve the Yellow Side Second The center pieces of a Rubik's Cube remain static, and yellow is always opposite to white. If you have any other case hold the cube as shown above to match your case and use the algorithm below. Here I used old screen protectors, since I liked the texture they gave once they're finished. That means that when you flip the cube over to turn the solved white side downward, you'll have a yellow center piece on top. Repeat the above algorithm until you have completed the yellow cross on the U face. After completing the yellow cross you will need to turn the U layer to check to see if all the yellow edges are in the solved position, if two are solved, or if none are solved. Turn the U layer to match up solved edges and identify which case you have. There are twelve edge pieces Corner pieces have three colors per piece. The Rubik's Cube is more than just a toy; it's a challenging puzzle that can take novices a long time to solve. In this example, the blue sticker on the edge matches with the blue center. Hold the matched edge on the F face so that it forms an upside down T. You can experiment and create some extremely hard puzzles yourself! Fool your friends and family with the different Rubik's Cube puzzles that you learned. If you enjoyed my this instructable, then please vote for me in the Puzzle Challenge. The center piece determines what color each side is. Check our article on best speed cubes to improve how quick you can solve the Rubik's cube. If there is a white corner in an unsolved position on the D layer you can use the previous algorithm to bring it to the U layer and then proceed as normal. The white layer should now be solved. Solving the Second Layer Hold the cube so that the white center is the D face and the yellow center is the U face. Solving the Yellow Cross After completing the second layer you will have one of the following patterns on the U face. After you do this for all unsolved corners, the cube will be solved! Congratulations! You've successfully solved the Rubik's cube. Edges have two colors per piece. Some people may never figure out how to solve without help; don't feel bad if you need extra information. Try to Find Your Own Route to Solving. Erno Rubik, the person who invented the Rubik's Cube, took more than a month to figure out how to solve his original puzzle. All votes are greatly appreciated. After moving an unsolved corner to the red location, use the following algorithm until the corner is solved. If all the yellow edges are resolved, proceed to the next step. Solving the Corners Yellow Turn the entire cube while keeping the center yellow as your face U and check to see what case you have: Case 1 One corner at the correct location, but need precise Being reversed 3 one resolved corner corner 4 one Singing Solved, other corners at the right place, but they need to be reversed in case 5 If now the yellow corners are in the right place, use the following algorithm to get one of the cases, and you will have a of the 4 cases. There are eight singing peans of the layer (u) Turn the right layer (r) rotate the left layer (l) rotate the front layer (f) Turn the rear layer (B) Turn the layer (D) Most speed cubes plus the same color arrangement as below, with opposite white, orange opposite the opposite, green next to the blue. Creating the flower is a mainly intuitive step, but here is two tips that help you make it easier! If a white sticker is inverted, hold the yellow center on the face F to move a white sticker to the red place, hold the cube as shown and perform the following algorithm after completing the flower. rotate the u layer at the second color of a white edge correspond with a central pea and hold -a as shown below. This will move the edge to the U layer and allow you to resume from the previous step. This can also be used to bring an incorrectly placed edge to the U layer. Make sure the printed image fits into the protective plastic sheet of the screen. Always wanted to solve a cube from Rubik? In this example, the second color is orange that needs to go to the left slot, already the orange center is on the left face. Rotate the layer in U here is our guide on how to solve a guide to Rubik cube beginners, who will start solving the famous break-in -wind in a short time! Version Printable - Download Link to familiarize yourself with the Cube Center's peans have a color each and it doesn't move. Put four white edge peals in any order The yellow center ignoring the position of singing. I used the cutting paper closely and clean, and put it against a corner on the contact paper, and used a lady and traced around it. Rubik cube instructions usually use letters of letters to refer to specific faces, so even if you can intuit what "corner peals" or "Central Pie", you must still understand that L It means left face. Identify the second color on the combined edge and make sure you need to move left or right. If you look at Rubik's cube instructions, they usually include vocabulary referring to the six faces of the cube, in addition to things such as singing and central people. Run the algorithm below and repeat that there are no white edges around the yellow center. If you do not have the contact role, use another type of cold slim leaf, or you can use old / non-used electron device protectors (iPod, PDA) instead (6 of them.) Another thing to use is a

real lamination mom. Once you do this, you will need to repeat the above steps that all white corners are in the position resolved. Right left swap left swap right flipd border if a border peanly is in the correct slot, but needs to be turned, keep the edge on the right layer and use the right exchange algorithm. I left a little advantage everywhere, to explain the human error. Conventional wisdom within the Cube de Rubik community maintains that it is not in a cheat to look for solutions. Now you will show your friends and make your new skill! Can you be wondering where below? The same is true of Rubik's cubes. After that, I carefully put the paper in the middle of the peeled contact paper. For the kibuR kibuR ed obuc mu moc riv medop saossep sa omoc odnatugreP):-et-etreviD roiretna ontirogla o moc agissorp 4 e 2 Without even looking? It can be more fancil for you to find out what to do, seeing it in action, instead of reading about it and playing diagrams. Note that different instructions can use different sounds to indicate when a specific face should be removed from you or inverted. Increase the cross -shaped white pieces on the face up, or the upper layer of the cube. There are many ways to reach this solution; Therefore, if you dominate the technique shown in instructions, you may try to create a new one for your own. Solve the white corners hold the cube so that the white center is the face of the yellow center to be the face in U. After doing this, cut the mimic borders of excess of plastic. The upper and lower faces, or up and down, are resolved in a similar way, and the other faces of the cube are slower. Awatch Tutorials, if you find written instructions and diagrams to solve Rubik's cubes to be filed, look for a video tutorials. There are important steps between the steps, but you will not resolve the cube trying to solve each side individually. You can also close your eyes and make the twists and then try to resolve it. If you are not so careful or there is a lot of slide sheet to use, just put it somewhere in a corner and cut the square of paper. So, I try my best to solve it. It can take more than one execution of the algorithm to the corner resolve. solve.
